

Transfer files via FTP with this easy to use FileMaker plug-in.

The FTPit plug-in for FileMaker Pro allows you to use the File Transfer Protocol to upload and download files from any FTP site. Use it to upload static web pages and images to a web site. Use it to catalog the files and directories on an FTP site. Use it in your bound solutions to download new versions of your databases. Use it to sync two remote databases using a common FTP site. The possibilities are endless! Transferring files via FTP from FileMaker has never been so easy and flexible!

Features:

- Upload or download any file you have access to on any FTP site.
- Upload a full static webpage using only FileMaker Pro and FTPit.
- Queue up multiple uploads and downloads and sit back while they all get uploaded or downloaded.
- Watch everything that FTPit is doing with its Status Window.
- Catalog all the files on an FTP site using FTPit's directory listing functions.
- Compatible with FileMaker 4, 5, 6, Mac OS 9, X, and Windows.
