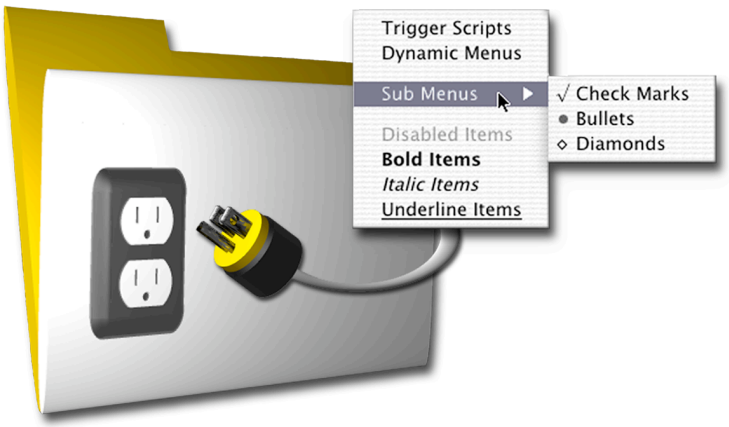
# SCRIPTit

## Trigger scripts from any calculation with this FileMaker plug-in.



SCRIPTit is an interface enhancement plug-in that allows you to define script events and dynamic popup menus. With this plug-in you can define script events that happen immediately, at any future time, or on any repeating interval. The dynamic popup menus can have any number of menu items, and any number of cascading sub menus (limited only by OS issues). The menu items can be bold, italic, underline, or any combination of those styles. You can have check marks, round bullets, and diamond shaped bullets. You can change the entire appearance of any menu item at any time, including enabling and disabling items. Whenever the user chooses a menu item, SCRIPTit will run a script in your database. Triggering scripts with FileMaker has never been so easy and flexible!

## Features:

- Create dynamic menus and submenus on your FileMaker layouts.
- Triggers scripts when SCRIPTit menu items are selected.
- Insert previously defined menus into new menus on the fly.
- Trigger scripts in any calculation.
- Define your menus with easy to use XML.
- Call scripts at timed intervals.
- Read XML Files from your hard drive for menus and scripts.
- Trigger a script when exiting a field.
- Pass values through your scripts and menus.
- Compatible with FileMaker 4, 5, 6, Mac OS 9, X, and Windows.
